Notation :
$w \equiv w'$ notes that w and w' are conjugate.

There exist $u, v \in \Sigma^*$ such that :
$w = uv$ and $w' = vu$.

Tilings

Definition :

A *tiling* of the plane by a polyomino p is a set T of non-overlapping translated copies of p that covers all the plane.

$$\bigcup_{p_u \in T} p_u = \mathbb{Z}^2$$

$$\bigcap_{p_u \in T} p_u = \varnothing$$

Tilings

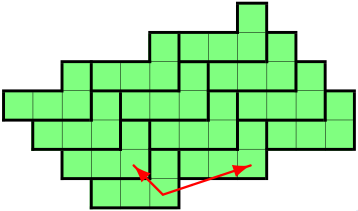
Definition :
A *tiling* of the plane by a polyomino p is a set T of non-overlapping translated copies of p that covers all the plane.

$$\bigcup_{p_u \in T} p_u = \mathbb{Z}^2$$

$$\bigcap_{p_u \in T} p_u = \emptyset$$

Regular

$$\exists u, v \in \mathbb{Z}^2, T = \{p_{iu+jv} | i, j \in \mathbb{Z}^2\}$$



Tilings

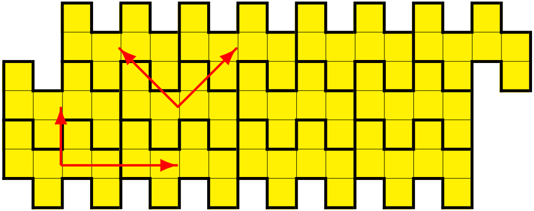
Definition :
A *tiling* of the plane by a polyomino p is a set T of non-overlapping translated copies of p that covers all the plane.

$$\bigcup_{p_u \in T} p_u = \mathbb{Z}^2$$

$$\bigcap_{p_u \in T} p_u = \varnothing$$

Irregular

$$\nexists u, v \in \mathbb{Z}^2, T = \{p_{iu+jv} | i, j \in \mathbb{Z}^2\}$$



The tiling problem

Problem

Given a word $w \in \Sigma^*$ coding the border of a polyomino p, does p admits a tiling of the plane.

The tiling problem

Problem

Given a word $w \in \Sigma^*$ coding the border of a polyomino p, does p admits a tiling of the plane.

Complexity : let n be the length of w.

The tiling problem

Problem

Given a word $w \in \Sigma^*$ coding the border of a polyomino p, does p admits a tiling of the plane.

Complexity : let n be the length of w.

Lower bound : $\Omega(n)$

The tiling problem
